Digital Literacy Project: Final Comprehensive Report

Course: Digital Literacy (CSE1021)

University: VIT Bhopal

Student Name: Anivesh Singh

Reg No: 25BSA10154

Role: Student Digital Ambassador

---

1. Module 1: Digital Literacy Awareness (Visual Communication)

In the first phase, the primary focus was on **Visual Communication**. By leveraging Canva, I moved beyond technical jargon to create an infographic that defines digital literacy for the modern era. The core achievement was **distillation**—taking complex concepts like cybersecurity and digital hygiene and transforming them into accessible, actionable icons. This module proved that as an engineer, the ability to explain a concept is as important as the ability to build it.

2. Module 2: Professional Portfolio (Strategic Branding)

This module established a "Three-Pillar" digital identity to ensure professional growth is documented and verified:

- **LinkedIn:** Acts as an evolving digital resume and networking hub.
- **GitHub:** Serves as a transparent technical laboratory for version control.
- **Kaggle:** Provides a gateway into data science and analytical research. This strategic alignment ensures that my professional evolution over the next four years is searchable and industry-ready.

3. Module 3: Technical Problem Solving (Logic & Collaboration)

This module addressed the dual nature of modern engineering: **Individual Logic and Collaborative Data**.

- **HackerRank:** Validated fundamental algorithmic thinking through the "Solve Me First" challenge.
- **Google Workspace:** Mastered the flow of information by integrating Google Forms and Sheets to collect, organize, and analyze data in a cloud-based environment.

4. Module 4: Digital Etiquette (The Professional Handshake)

This module focused on **Communication Protocols** and mitigating **Negativity Bias**. I practiced structured email etiquette for high-stakes scenarios, ensuring that my online interactions are perceived as professional and intentional. By replacing informal messaging with formal, well-structured emails, I have mastered the "Digital Handshake" required for academic and industry success.

5. Module 5: Cybercrime Awareness (Human-Centric Security)

The final module provided a deep dive into **Human-Centric Security** through the RTO E-Challan scam case study. The key takeaway was a shift from **"Passive Trust" to "Manual Verification."** I recognized that technical firewalls are only as strong as the user. Moving forward, I am committed to verifying official domain structures (.gov.in) and utilizing national reporting tools like **1930**.

Final Project Conclusion

This project has successfully bridged the gap between technical capability and digital responsibility. I have transformed from a consumer of technology into a **Student Digital Ambassador**, prepared to navigate the next four years of my B.Tech journey with digital confidence and ethical integrity.
